SESS-1 | Create Session Activity

Card:

As a user I select the "Session Mode" button so that I may start a session

Conversation:

Session Activity layout will consist of a RecyclerView (use RecyclerView because each item [or in our case "session users"] can have a predefined layout) where the main user can monitor exposure.

Three buttons "Start Session", "Add Session User" (WIP on the second button text) and "Edit Session User" (WIP on the third button text) will be present on the bottom of the layout: "Start Session will be the entire bottom while Add and Edit will each occupy half the screen and be placed on top of Start - Initially the RecyclerView will display - "No Session Started"

Confirmation:

When clicking "Session Mode" does the SessionActivity display correctly? ✅

Precision: The first screenshot, shows the tester clicking on the button "To Session Activity" and the second screenshot is of the session activity. The RecyclerView is not visible since there are no elements yet to display.

Initially, when opening the SessionActivity, do the buttons display the correct text? Are the placements correct? Is the "No Session Started" text displayed? ✅

The "No session started" text is visible on-screen

The buttons are all present as instructed, the only deviation concerns the "Start Session" button. It does not cover the entire bottom of the activity as there was a warning present explaining that the button was "too large".

Plus all the DoD ✅

This is the main activity's layout
WIP

To Session Activity

To stats Activity

Session Activity

Currently no session started

Add User

Edit User

Start session
